### THE BUSINESS OF BEES

When she was just four years old, Asli Samanci decided to become a scientist. Later, her studies led her to a career in food science. In fact, this combines many subjects: biology, microbiology, and chemistry all together. Today, she also runs a business. Her company, Bee & You, creates health products made from propolis, a substance bees produce. For Asli, every day at work is busy and unique. She thinks about every step of the development process for her honey products. “When you become an entrepreneur, after being a scientist, you’re still a scientist,” she says.

To make her honey-based products, Asli follows a scientific process. First comes the research and development. Then, the company does clinical studies to see how the products might work. This is unlike other companies, which make a product first and then test it. That is why it can be said that all Bee & You products are “backed by science”.

Samanci was inspired by her son to set up her company. When he was a young child, he was frequently sick. A doctor recommended propolis, which can fight bacteria. But Samanci was not satisfied with the products she found on the market. So she decided to work directly with a beekeeper to create the product her son needed.

Samanci still works with beekeepers, providing her products to a larger consumer base and doing it in a balanced way. Within 10 years, her beekeeping partners have gone from managing about 50 hives to managing 300 or 400 hives. “As they develop, they look after more bees,” Samanci says. “This means we are increasing the number of bees in the world. And that is good for nature, because 80% of all plants are pollinated by bees.”

Working and being able to contribute to nature’s well-being is “a win-win business model” for Samanci. And she advises all entrepreneurs and scientists to find a balance. “Combine ecology and innovation. Be good to yourself and to nature. That is how life should go on.”

### READY FOR LOVE

Charlotte Liebling considers herself a “world watcher”. That is someone who carefully observes the world around her. Here is an example: When she was in college, she volunteered at a store that sold second-hand goods. **2.1.** \_\_\_\_\_ Observing that process, she could tell that the toys held great sentimental value for their owners. So she felt sad when they were sold very cheaply, put in the dog-toy section, or – worse – thrown away.

One evening when she got home from work, she started making a detailed analysis. She realised this was not happening only in her town. **2.2.** \_\_\_\_\_ All through the night, Liebling scribbled ideas on sticky notes and posted them on her walls. That is how the Loved Before toy-adoption agency began.

The process starts when someone donates a soft toy. People can do so through the mail, or by taking a toy to a local drop-off point in the United Kingdom. The original owner writes down the name of the toy and a story about it. **2.3.** \_\_\_\_\_ Liebling and her team believe that sharing what makes the toy special helps potential new owners understand its value. Next, the toy is cleaned, photographed, and packaged with its name and story. Every Monday, toys are posted for adoption on the Loved Before website.

Since its creation in 2019, Loved Before has sold more than 50,000 stuffed toys. But the company’s goal is more than just trying to save some toys from landfills. **2.4.** \_\_\_\_\_ She explains that Loved Before hopes to teach kids about the value of loving second-hand things again, in the hope that the effects will go far beyond the better treatment of teddy bears.
